## 2.4 USING THE EDItEUR INVOIC MESSAGE FOR UK BOOK TRADE INVOICES

Version November 2009.

### 2.4.0 CHANGES FROM ISSUE JANUARY 2010

#### New section 2.4.4 – Handling Taxation at Invoice Line Level

Section added to give guidance on the use of TAX/MOA segments at line level. All following sections have been renumbered.

#### 2.4.1 INTRODUCTION

This document specifies the way in which BIC has agreed that the EDItEUR INVOIC standard will be used in the UK book trade to carry invoices. In EDIFACT the same message is used for credit notes. See section 2.5 for details of its application for this purpose.

It is assumed that an invoice may either correspond to a single shipment of goods from supplier to customer, or it may cover a number of shipments made during a particular period, and possibly of a particular type.

In book supply, an invoice may cover order lines which were originally sent in different order messages on a wide range of different dates. For this reason it is a fundamental principle that individual invoice lines should be wholly self-contained and should carry an individual reference to the original order.

An INVOIC message may be sent as an original invoice, with the same legal and tax significance as the corresponding paper document, or it may be sent as an electronic copy of a paper original, sent by EDI in order that the customer can take the relevant data straight into his own computer system without re-keying.

It should be noted that, where both a paper original AND an electronic copy of the invoice are issued, the paper invoice will continue to be regarded as the legal document, for tax and other purposes - in the event of any discrepancy between the VAT amounts declared on the paper invoice and the electronic copy, the paper invoice will take precedence.

Given also that, in such cases, there will be two copies of the invoice in circulation for the same supplies, HM Customs & Excise will need to be reassured that the potential for the processing of both documents by the invoicee is minimised, since this could result in the double-deduction of input tax

For an INVOIC message to be treated as an original tax document, HM Customs & Excise must have authorised the message implementation for this purpose. These BIC *Guidelines* have been approved by HM Customs & Excise, provided that the requirements in section 2.4.2 are fully met by implementers.

## 2.4.2 HM CUSTOMS & EXCISE REQUIREMENTS

The following is a summary, correct as of November 2001, of the requirements which must be met by trading partners who intend to exchange EDI invoices as original tax documents:

The trading partners must give at least one month's prior written notification of their intention to their respective VAT Offices. In response, the VAT Office will issue standard "conditions" letters, which set out the particular requirements to be met. The Office may also wish to visit the trading partners to observe a trial run, examine the results, and satisfy itself that required conditions can be met.

These standard conditions vary slightly, depending upon whether the trading partner is the sender or receiver, but broadly they encompass the following points:

- (a) Each file of invoices must have a unique generation/version number, or some other unique means of identification. In the BIC EDItEUR implementation, this will be the tax control message number contained within Composite C002, DE1004, of the TAXCON BGM segment.

- (b) For each file of invoices, the sender must create a summary control report which shows:

*The file identification number (see above);*

*The full names and addresses of both trading partners, and the invoicer's VAT Registration Number;*

*The number and type of each type of document in the file. HM Customs & Excise requires separate control counts for each type of document, eg invoice (380), credit note (381), etc.*

*For each rate of VAT within each document type, the total amount subject to VAT at that rate and the total amount of VAT charged at that rate.*

To simplify these control reports, HM Customs & Excise recommend that invoices and credit notes should not be mixed in a single transmission, but should be sent as separate interchanges. *This is also the practice which BIC and EDItEUR recommend. See Section 2.5 (forthcoming) for guidelines on the use of the INVOIC message for credit notes.*

This summary control report must be sent to the receiver as part of the transmitted file, in the form of a TAXCON message – *see Section 2.6.*

The sender is not obliged to print out the summary control report provided that it is archived electronically, together with a secure copy of the invoice file to which it relates, for the retention period required by HM Customs & Excise (normally six years) and can be made readily available for inspection on demand.

The requirements for the receiver are basically the same, in respect of the preservation and archiving of summary file control reports and the related invoices. There are, however, two additional requirements:

- (c) On receipt of each incoming invoice file, the receiver must re-total all the invoices on file and reconcile these re-calculated summary control totals with those transmitted by the sender in the TAXCON message, as a check on the completeness and accuracy of data transfer. The receiver must produce his own summary control report, which again may be archived electronically, showing the results of these reconciliations. Any discrepancy between the transmitted and

re-calculated control totals must be notified to the sender.

- (d) Receivers must incorporate in their systems a control process that will prevent the same invoice file from being processed more than once against their internal accounting application (eg Accounts Payable), to prevent the possibility of double deduction of input tax.

Finally, following HM Customs & Excise acceptance of the electronic invoicing systems, any subsequent changes to either party's system should be notified to the relevant VAT Office, to give them the opportunity to review.

### 2.4.3 IDENTIFICATION OF SUPPLIER AND CUSTOMER

It would normally be a requirement that each invoice, in paper or electronic form, should carry the full name and address of both the supplier and the customer. In an EDI invoice, this is NOT necessarily required: a coded identification, preferably an EAN number, may be used in each INVOIC message, PROVIDED THAT (a) the full names and addresses are carried in the TAXCON message which is part of each INVOIC file, and (b) trading partners hold suitable look-up facilities to convert codes to names and addresses in text form, if required.

### 2.4.4 HANDLING TAXATION AT INVOICE LINE LEVEL

The following notes give guidance on the use of TAX/MOA segments at line level. They concentrate on the following MOA segments:

Segment group	Segment number	Explanation of use in INVOIC
26	42	One mandatory occurrence per invoice line, coded 203 in DE 5025, to give the line item amount after all line level allowances and charges, but excluding any applicable tax [other codes are also allowed]
33	58	This MOA segment is used only for mixed-rate VAT items, to specify the amount of the extended line value (in MOA segment 42, coded 203 in DE 5025) which is subject to VAT at the rate specified in the linked TAX segment 57. The sum of the amounts in the two MOA segments for mixed-rate item must equal the amount in MOA segment 42.  Note: this is wording from the current UK version of INVOIC – the full EDItEUR format allows this segment to appear in single-rate VAT items
43	68	One occurrence per repeat of segment group SG43 if it is necessary to specify the amount of an allowance or charge that is subject to tax at the rate specified in the linked TAX segment 67

**1. Single-rate or mixed-rate VAT items with no allowances or charges****Example 1. Item price £10.00. No charges or allowances. Zero-rated for VAT**

Segment number	Segment name	Element number	Element code	Value	Notes
42	MOA	5025	203	£10.00	
57	TAX	5278		0%	zero rate

Price paid: £10.00

**Example 2. Mixed-rate. 1<sup>st</sup> item price £3.00 – zero-rated. 2<sup>nd</sup> item price £4.50 – standard rate. No charges or allowances.**

Segment number	Segment name	Element number	Element code	Value	Notes
42	MOA	5025	203	£7.50	
57	TAX	5278		0%	zero rate
58	MOA	5025	125	£3.00	taxable amount of zero-rated item
57	TAX	5278		17.5%	standard rate
58	MOA	5025	125	£4.50	taxable amount of standard-rated item

Price paid: £8.28 (includes 78p tax on item)

Note: sum of values in MOA (58) equal value in MOA (42) coded 203

## 2. Single-rate VAT items with charges or allowances at the same VAT rate as the item

TAX/MOA SG43 is not mandatory as the line is at the single rate specified in TAX segment 57. However, including it would make calculations easier for the receiver especially for allowances.

### Example 3. Item price £10. Charge 68p. Zero-rated for VAT

Segment number	Segment name	Element number	Element code	Value	Notes
42	MOA	5025	203	£10.68	includes charge
57	TAX	5278		0%	zero rate
61	ALC	5463		C	charge
67	TAX	5278		0%	zero rate
68	MOA	5025	125	£0.68	taxable amount of charge

Price paid: £10.68

Note: MOA (68) gives the information that: of the £10.68 line value, 68p is a charge

### Example 4. Item price £10. Allowance £1. Zero-rated for VAT

Segment number	Segment name	Element number	Element code	Value	Notes
42	MOA	5025	203	£9.00	includes allowance
57	TAX	5278		0%	zero rate
61	ALC	5463		A	allowance
67	TAX	5278		0%	zero rate
68	MOA	5025	125	£1.00	taxable amount of allowance

Price paid: £9.00

### 3. Single-rate VAT items with charges or allowances at a different VAT rate from the item

#### Example 5. Item price £5.00 – zero-rated. Charge 49p – standard rate.

Segment number	Segment name	Element number	Element code	Value	Notes
42	MOA	5025	203	£5.49	includes charge
57	TAX	5278		0%	zero rate
58	MOA	5025	125	£5.00	taxable amount of zero-rated item
57	TAX	5278		17.5%	standard rate
58	MOA	5025	125	£0.49	taxable amount of standard-rated item
61	ALC	5463		C	charge
67	TAX	5278		17.5%	standard rate
68	MOA	5025	125	£0.49	taxable amount of charge

Price paid: £5.57 (includes 8p tax on charge)

Notes:

1. MOA (58) is now mandatory as the 'extended line value' includes 2 rates of VAT.
2. MOA(58) INCLUDES the charge so that the sum matches that in MOA(42).  
MOA(68) then gives the information that: of the £5.49 line value, 49p is a charge.

#### Example 6. Item price £50.00 – zero-rated. Allowance £10.00 – standard rate.

Segment number	Segment name	Element number	Element code	Value	Notes
42	MOA	5025	203	£40.00	includes allowance
57	TAX	5278		0%	zero rate
61	ALC	5463		A	allowance
67	TAX	5278		17.5%	Standard rate
68	MOA	5025	125	£10.00	taxable amount of allowance

Price paid: £41.75 (includes £1.75 tax on allowance)

#### 4. Mixed-rate VAT items with charges or allowances

**Example 7. Mixed-rate. 1<sup>st</sup> item price £3.00 – zero-rated. 2<sup>nd</sup> item price £4.50 – standard rate. Charge 49p – zero-rated.**

Segment number	Segment name	Element number	Element code	Value	Notes
42	MOA	5025	203	£7.99	includes charge
57	TAX	5278		0%	zero rate
58	MOA	5025	125	£3.49	taxable amount of zero-rated item
57	TAX	5278		17.5%	standard rate
58	MOA	5025	125	£4.50	taxable amount of standard-rated item
61	ALC	5463		C	charge
67	TAX	5278		0%	zero rate
68	MOA	5025	125	£0.49	taxable amount of charge

Price paid: £8.77 (includes 78p tax on item 2)

Note: MOA(58) INCLUDES the charge so that the sum matches that in MOA(42). MOA(68) then gives the information that: of the £7.99 line value, 49p is a charge.

**Example 8: Mixed-rate. 1<sup>st</sup> item price £20.00 – zero-rated. 2<sup>nd</sup> item price £30.00 – standard rate. Allowance £15.00 – standard rate.**

Segment number	Segment name	Element number	Element code	Value	Notes
42	MOA	5025	203	£35.00	includes allowance
57	TAX	5278		0%	zero rate
58	MOA	5025	125	£14.00	taxable amount of zero-rated item
57	TAX	5278		17.5%	standard rate
58	MOA	5025	125	£21.00	taxable amount of standard-rated item
61	ALC	5463		A	allowance
67	TAX	5278		17.5%	standard rate
68	MOA	5025	125	£15.00	taxable amount of allowance

Price paid: £41.30 (includes £6.30 tax on item 2 and allowance)

Note: Where an allowance is against a line containing items of mixed-rate, it should be taken as a proportion of the value of each item. Therefore, in example 8, the value of item 1 is 2/3 the value of item 2 and so the allowance against item 1 is 2/3 of the allowance against item 2. If the line is 'mixed-rate' because of a charge (see example 5) the allowance is against the value of the item only

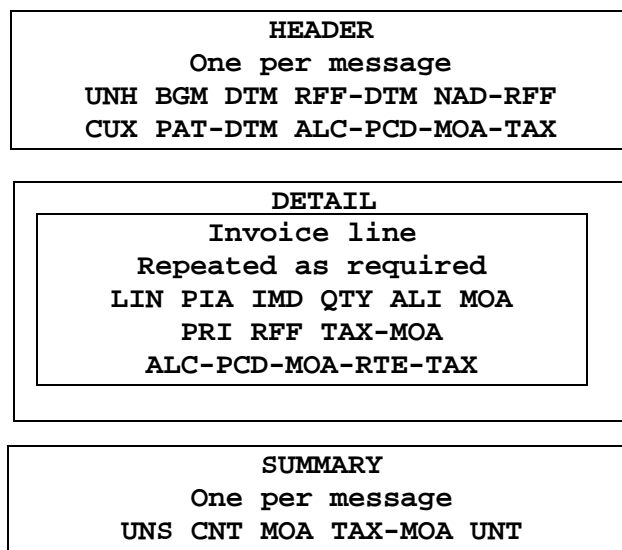

#### **2.4.5 STANDARDS ON WHICH THIS IMPLEMENTATION IS BASED**

This UK implementation guideline is based on Issue 1.2 of the EDItEUR Book Trade EDI Implementation Guidelines for the INVOIC message. The version of the EDIFACT message adopted by EDItEUR is EANCOM INVOIC Version 008, taken from the 1997 release of the EANCOM message set, based on EDIFACT Directory D.96A.

## 2.4.6 MESSAGE BLOCK DIAGRAM

The broad structure of the invoice message as used for this application is depicted below:

The broad structure of the invoice message as used for this application is depicted below:

The **header** section specifies the message type, gives the message a unique identification and date, carries any general references, identifies the sender and addressee and, if required, delivery location, and may give currency, payment terms, and sundry charge detail which applies to the invoice as a whole.

The **detail** section consists of a group of fourteen segments which together constitute a single invoice line. The LIN segment carries the line sequence number within the message and an EAN number. The PIA segment carries product codes other than EAN numbers. The IMD segment may carry a brief text description of the invoiced item (not recommended). The QTY segment gives the invoiced quantity. The MOA segment gives extended line values. The PRI segment states the prices on which the invoice line is based. The RFF segment carries references specific to the line item. The TAX-MOA segment pair specifies tax which applies to the line item; and the ALC segment group details charges or allowances at line level.

The **summary** section carries control totals and repeats the unique identification of the message for purposes of integrity checking. It also carries various summary figures required for tax calculation, as well as the final total to be paid by the invoicee.

## 2.4.7 INVOIC MESSAGE STRUCTURE

The table on the next four pages shows the complete EANCOM INVOIC message structure. Shaded segments and segment groups are NOT used in the BIC UK implementation of the EDItEUR invoice for trade book supply.

The first column identifies the segment or segment group. The second column shows the EANCOM segment number. The third column shows the status of the segment or segment group in EDIFACT terms (NOT specifically for the BIC/EDItEUR application). In this column, letter M means “mandatory if the segment group to which the segment belongs is used”. Letter C means “conditional”, or not mandatory. The fourth column shows the maximum number of occurrences of the segment in each occurrence of the segment group to which it belongs.

: 1000	Document/message name	O	an..35	Not recommended, since the message type is fully identified by the code in DE 1001
+ <b>1004</b>	<b>Document/message number</b>	M	an..35	Invoice number assigned by document sender: mandatory in EANCOM
+ <b>1225</b>	<b>Message function, coded</b>	M	an..2	Mandatory in EANCOM 9 = original: the EDI INVOIC is the authoritative document for legal and tax purposes ( <i>Trading partners using this form must satisfy themselves that any special requirements of HM Customs &amp; Excise have been met.</i> ) 43 = additional transmission: an EDI copy of an invoice/credit note/debit note sent also in paper form, the latter being the authoritative document for legal and tax purposes; or an EDI debit note sent to claim a credit when the authoritative document for tax accounting will be the supplier's subsequent credit note
+ 4343	Response type, coded	N		Not used in EANCOM

**Example:**

BGM+380+9701234+43'

Invoice number 9701234

**3 DTM DATE/TIME/PERIOD**

**One mandatory occurrence per message, to give the message date. A second occurrence may also be mandatory in VAT invoices and debit or credit notes, to give the tax point date when the INVOIC message is a tax document. Inclusion of the tax point date is mandatory in the UK, for example, even when it is the same as the invoice date.**

**SG15 ALC-SG17-SG18-SG19-SG20-SG21**

Each occurrence of segment group SG15 represents an allowance or charge applied to the invoice as a whole. The allowance or charge may be stated as (a) a percentage of the invoice value, using PCD segment 28, or (b) a fixed monetary amount for the invoice, using MOA segment 29. There can be a maximum of 15 occurrences of segment group SG15 per invoice message.

In practice SG15 should normally be used to specify a fixed monetary charge, such as a delivery charge, which applies to the invoice as a whole.

**26 ALC ALLOWANCE OR CHARGE**

One mandatory occurrence per segment group SG15, defining the reason for the allowance or charge and, if necessary, the method of calculation

**SG25 LIN-PIA-IMD-MEA-.....-SG38-SG44**

Each occurrence of segment group SG25 represents one invoice line or sub-line. There can in theory be up to 9,999,999 such lines in a single invoice message.

**33 LIN LINE ITEM**

One mandatory occurrence per invoice line. In this application the LIN segment is used to carry the line sequence number and an EAN article number identifying the invoiced item. BIC recommends that, as in other trading messages, BOTH the EAN number AND the ISBN should be sent.

+ 1082	<b>Line item number</b>	M	n..6	Line sequence number, starting at one and incremented by one for each successive line

**SG28 PRI**

**Segment group SG28: only PRI segment 47 is used in this application**

**47 PRI PRICE DETAILS**

**In UK book trade practice, there are three mandatory occurrences of PRI segment 47 per invoice line.**  
**One occurrence, coded AAA in DE 5125, gives the supplier's unit cost price (excluding tax).**  
**One occurrence, coded AAE in DE 5125 and SRP in DE 5387, gives the suggested retail price including VAT if applicable.**  
**One occurrence, coded AAB in DE 5125, gives the unit price excluding VAT and before discount.**

 See code list and notes on next page

**Example:**

PRI+AAA:7.5'  
 PRI+AAE:12.5::SRP'  
 PRI+AAB:12.5'

Supplier's unit cost price = 7.50  
 Suggested retail price = 12.50  
 Unit price before discount excluding VAT = 12.50

**Code table for PRI DE 5125**

AAA	Calculation price net: the unit price which will actually be charged by the supplier excluding tax but including any allowances or charges
AAB	Calculation price gross: the supplier's unit price excluding all taxes, allowances or charges
AAE	Information price: including tax but excluding any allowances or charges: use for retail unit price

**Code table for PRI DE 5387**

FOC	Free of charge (EDItEUR code)
PRP	Promotional price: suggested retail price which applies during the limited period of a special promotion, including a pre-publication price (not under retail price maintenance): may have an expiry date in DTM segment 47A
SRP	Suggested retail price: unit price, not subject to retail price maintenance

**Segment 47A (DTM) is not used in this application**

**SG29 RFF-DTM**

**Segment group SG29: only RFF segment 48 is used in this application**
